LAWRENCEDOORS.COM

SINCE 1925, LAWRENCE ROLL-UP DOORS, INC. has been manufacturing steel and aluminum rolling door products in Los Angeles, California. We offer various duty-cycle rated doors and grilles to meet the needs and budgets of each building owner or tenant. Our "H-Series" products are suitable for the most demanding conditions of heavy industrial settings, maximum-security environments, and high-frequency usage. Lawrence "M-Series" doors are our most popular products, value engineered for normal commercial applications. Our "S-Series" doors and grilles combine quality design and lighter weight construction to offer an economical product for the most cost conscious buyer. "C-Series" products combine door and grille features with more compact designs for service counters and other small openings. Decades of product design and manufacturing experience enable us to provide custom products to comply with special design and unique installation requirements.

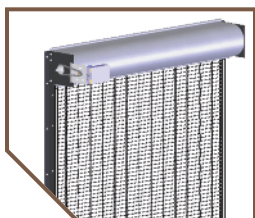

## SERVICE DOORS

*Service Doors* – the "basic" roll-up doors suitable for many applications – can also be provided as *Weather-Edge Doors* with perimeter weather seals, as *Insulated Doors* for maximum climate control, or as *Ventilated Doors* with perforated or fenestrated curtains for the ultimate blend of ventilation, visibility and security. Most service door products are available with a variety of slat profiles, mounting configurations, operation methods and options.

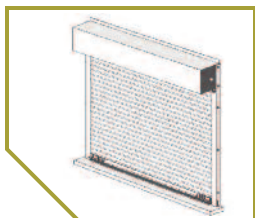

## FIRE DOORS

*Fire Doors* offer state-of-the-art fire protection with "Easy-Reset" or "Auto-Reset" chain, crank and motor operators that automatically close the door without a loss of spring tension and eliminate the need for traditional mechanical re-set. *Insulated Fire Doors* combine fire protection properties with thermal insulation and sound control. Lawrence fire door products can be rated up to 4-hours, are available with an S-Label as air leakage rated "*Smoke Doors*" and are classified by Underwriters Laboratories (UL), certified for Canada (c-UL), FM Approved, and listed by the California State Fire Marshal (CSFM).

## GRILLES

*Grilles* allow for maximum visibility and air circulation while providing area protection. They can be designed for typical shopping mall and storefront installations as well as for higher usage applications such as parking structures. *High-Performance Grilles* are intended for up to 300,000 cycles usage and offer an option for faster operating speeds. *Glazed Grilles* combine visibility with the enhanced security of a closed panel construction. Standard grille features include a self-leveling bottom bar and field-adjustable curtain stop and lock bar heights. Most grilles can be provided in several curtain patterns, materials and finishes and with a variety of options.

## COUNTER DOORS

*Counter Service Doors* and *Counter Fire Doors* combine many of the features of full-size service doors and fire doors with more compact designs resulting in attractive products requiring less clearance. *Counter Grilles* offer the compact design and finished appearance of a counter service door plus the ventilation and visibility of a grille for service counters and small entry openings. Many counter door products can also be provided with a Trim & Sill Package.

## CUSTOM DOOR PRODUCTS

Custom Door Products can be designed for many special applications, unique openings, or unusual operating conditions. Following are some examples of our custom design and manufacturing capabilities:

- Very large openings (over 40 ft. wide or high)
- Inverted operation (doors that roll down to open)
- Unusual openings (curved, inclined, horizontal, irregular shapes)

SIDE-FOLDING CLOSURES AND FOLDING GATES ARE OTHER PRODUCTS MANUFACTURED BY LAWRENCE ROLL-UP DOORS, INC.
